

Company Cards

Plastic Card Solutions

Features and Facts

Embossing:

Here at company card we can offer a range of extra features for your cards. We can emboss names, numbers and dates, any type of variable data onto your cards. We can emboss your plastic cards in silver and gold, punched neatly and professionally into the material.

Espaille Dye:

We offer some newer features on the market, including a hologram effect foil stamp. This can be in a matt or gloss finish, depending on your card material and the effect you want. We have a selection of dyes however if you can have a personalised dye created for an extra cost.

Encoding:

As opposed to more visible card personalisation choices, you may also wish to store data on your plastic cards. Data can be discretely encoded onto the card and can be used to tie the card and cardholder to any given transaction via dedicated card readers. There are various ways of encoding a plastic card. The cost for bar coding comes at a lower cost than magnetic strip encoding, which is also lower in cost compared to smart cards. Barcodes are easy to use and a great money saving way to provide a membership card or access card. However they can also be easily copied, therefore you may want a more tamper proof product such as a magnetic strip or smart card. At Company Cards we put 100% into creating all of our products, so whatever you choose, we will still provide you with a top quality product that does the job you want.

Access Control:

Some people who are in the market for identity cards for employees, students and visitor passes, look at using access control cards. Some people who are looking for individual ID cards are also looking for a products that can grant them access to certain data, equipment and departments. Multifunction, microprocessor based smart cards incorporate identity with access privileges and can also store value for use in various locations, such as cafeterias and stores. Therefore when managing a work force, enable safety on campus and generally keeping well organised, access control cards are a great solution.

Barcodes and QR Codes:

A barcode consists of a group of printed and variously patterned bars and spaces, numeric and sometimes alpha numeric data, that are designed to be scanned and read into computer memory as identification for the object it labels. At Company Cards we can provide both 1D and 2D barcodes, 2D (QR) can hold more information. Like most products we produce here the barcodes are digitally printed to the core of the card meaning they'll last longer

Magnetic Strips:

We can add Magnetic Strips here onsite. They are ideal when looking to create a card that holds information. Data can easily be encoded onto the card and each card can encoded with individual information for its intended user.

Smart card encoding:

Smart Cards provide tamper-proof storage of user and account identity. Smart card systems have proven to be more reliable than other machine-readable cards, like magnetic stripe and barcode. Smart cards also provide vital components of system security for the exchange of data throughout virtually any type of network. They are ideal for containing information such as storage of user passwords. The costs to manage password resets for an organization or enterprise are very high, thus making smart cards a cost-effective solution in these environments. Multifunction cards can also be used to manage network system access and store value and other data. We offer combination technology here at company card such as Mag strips on Chip or contactless cards, you can call us today to discuss your options. As different smart cards have different implementation processes. Data encoding by binary code being written to the miniaturised electronic circuit or 'chip' on the smart card is a similar process to any computer.

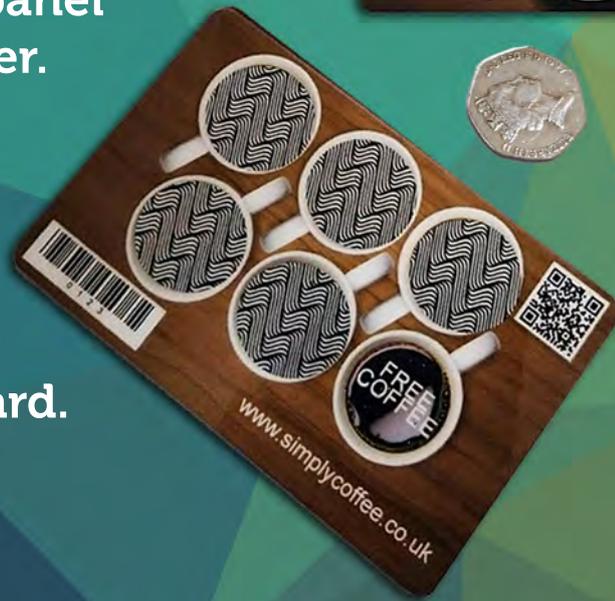

Signature Panels:

By applying a Signature panel to any part of your plastic cards, you are able to personalise the cards at an affordable price. We offer a range of signature panels that look professionally finished and are easy to write on. We suggest them on a variety of plastic card products as they really make a difference to your cards look and purpose.

Scratch Panels:

Scratch panels are quite effective for cards such as the lottery, however have you ever considered a promotional plastic card with scratch panels. These can also be just as effective and worth the investment when attending trade shows or holding events. We produce the same high quality plastic cards however we put as coating of scratch panel material over the laminate layer.

These can be made in various shapes and sizes and come off easily once scratched, to reveal anything from flat numbering to images digitally printed onto the core of the card.

Foil Stamping:

As well as trying our best to make sure your cards have all the best functions we also like to offer you a range of features to enhance the appearance of your cards. Foil stamped designs are a popular feature, which we can be placed onto the laminate surface of your plastic cards, to make them look professional and unique. We can make them in many different shapes, sizes and over images. .
